### Summary

It was realized a technical possibility of entering information of the 13-digit Global Trade Item Number — GTIN-code, corresponding to the product bar code, into the federal registers together with information providing identification of product in process of CoC and DoC registered.

The information is recorded into federal register during the process when Declaration of Conformity or Certificate of Conformity (DoC or CoC) is registering. It helps to prevent an illegal import of equipment and goods onto Russian market by non-authorized importers and resellers and illegal realization further.
